MEMORANDUM FOR: Acting Deputy Director (Administration)

SUBJECT: Facilities for [   ]   25X1

REFERENCE: Memorandum for the Acting Deputy Director (Administration),
dated 26 August 1953, subject: Facilities for the Washing-
ton Depot

25X1

1. By reference above, a project outlined for additional facilities
for the [   ] was transmitted to the Acting Deputy Director
(Administration).

2. The requirements for these facilities were reviewed on 4 September 1953
with the DDCI, the DD/A, the Assistant Director for Communications, the Chief
of Logistics, the Chief of Technical Operations/TSS, and other representatives.
Certain questions were raised concerning the Communications Engineering
facility and the requirement for air conditioning in the TSS shop area. The
areas in question have been reviewed by this office and the following infor-
mation is submitted:

a. The estimates for the Communication Engineering building as
submitted contained a requirement for three-phase electricity in that
building. When the TSS facilities are installed, three-phase power
will be available to the Communications Test and Evaluation Section
adjoining.

b. A building with doors at both ends can be provided for the Com-
munications Engineering shop for an estimated increased cost of $3,000.00.
Relocation is required, resulting in increases in the cost of power,
water and sewage facilities, and paving in the new location.

c. Elimination of air conditioning in one of the three shop areas
in the TSS facility will result in an initial saving of only $500.00.
Should air conditioning be eliminated in one of the shop areas, a five
ton air conditioning unit would be required in lieu of a $7\frac{1}{2}$ ton unit
for the three areas, the difference in cost being approximately $500.00.
Installation costs will be approximately the same in both instances.
